EXPERIENCE

Software Engineer August 2025 – Present
Microsoft *Redmond, WA*

- Halved Edge Update latency and doubled bandwidth savings by cutting payload sizes from 400MB to 200MB via differential patches with hash-based fingerprints; shipped to **1B+** devices in C++, Bash, Python, C#, and Kusto QL.
- Implemented the first-ever enterprise update policies for the unified Microsoft Copilot Super App on Windows and macOS (ADMX/ADML for Group Policy and Intune; .plist MDM profiles on macOS), enabling unification of **243M** devices (235M consumer, 8M enterprise), 95% of all eligible devices.
- Built Target Channel policies letting admins pin devices to Stable or Beta, with automatic rollback when moving to a lower channel, on top of macOS channel switching built for internal dogfooding which achieved 100% internal adoption.
- Shipped ESRP-signed, notarized macOS Copilot .pkg installers with MDM configuration, exposed them to Intune via the enterprise API, and cut release promotion time by 1 hour by moving MDM generation to Windows.
- Engineered AI agents into Copilot and Edge release pipelines, monitoring Kusto/ADX dashboards for build health and fleet telemetry, reducing incident triage from 30+ min to ~5 min.
- Led Linux incident response: resolved 10 incidents impacting ~20K devices in three months and shipped YAML and Docker config validation into a nearly decade-old Smoke test pipeline.
- Designed code check-in policies validating ~400 PRs/week, blocking stale compliance checks and flagging API changes lacking privacy review; earned full pipeline ownership within 3 months.

Software Engineer Intern May 2024 – August 2024
Microsoft *Redmond, WA*

- Designed and shipped an LLM council framework to evaluate model safety, benchmarking Copilot against prompt-injection, data-leakage, and jailbreak attacks at ~90% detection accuracy; delivered one month ahead of deadline.
- Built an early AI agent directly into the Edge codebase for bug-fixing and crash analysis, cutting engineer triage time by ~50%.

Software Engineer Intern May 2023 – August 2023
Microsoft *Redmond, WA*

- Modified the Microsoft Edge search ranking algorithm in C++ to support history-weighted and balanced result modes, exposed through a new TypeScript personalization settings page; contributed to a ~5% lift in user retention.
- Validated the feature via A/B experiment, observing reduced address-bar lingering and net positive revenue impact on Bing.

SKILLS

Languages: Python, C++, C#, SQL, Java, TypeScript, JavaScript, Bash, PowerShell.
Systems & Infrastructure: Distributed Systems, System Design, CI/CD, Infrastructure as Code, Observability, Incident Management, SRE, Azure.
AI / ML: AI Agents, LLM Fine-Tuning, RAG, NLP, Model Evaluation, MLOps, LLMOps.
Frameworks & Tools: PyTorch, TensorFlow, Kusto/ADX, Kubernetes, Docker, Terraform, GitHub Actions, Catch2.

AWARDS & HONORS

- Rhodes Scholarship Finalist (2025): Selected as 1 of 10 national finalists for the post-graduate scholarship at Oxford University.
- 2x Walker Award in Mathematics & Statistics, Amherst College (2023, 2025).
- Presidential & National Scholarship, Gov. of Zimbabwe (2020): Full study-abroad funding after ranking 1st of 50,000+ students on national A-Level exams.

EDUCATION

Columbia University Expected 2027
MS in Computer Science, Part-time *New York, NY*
Relevant Coursework: Deep Learning & Neural Networks.

Amherst College May 2025
BA in Computer Science & Mathematics *Amherst, MA*
Relevant Coursework: Machine Learning, Natural Language Processing, Artificial Intelligence, Probability and Computing, Optimization, Linear Algebra with Applications, Computer Systems, Real Analysis, Statistical Modeling.
